

TECHNICAL DATA SHEET

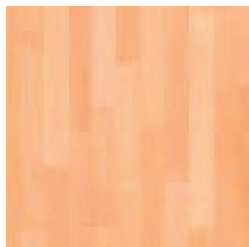

Vertical Baffles

Wooden panels in a modern version, this is the best description for our range of acoustic wall and ceiling Baffles. The combination of three-dimensional wooden elements with a subdued background is the perfect finish for any domestic and commercial spaces. A multitude of combinations in combining wooden blinds and backgrounds makes Baffles a great addition in contemporary interiors. The arrangement of geometric and dynamic patterns work well in the role of a wall or ceiling

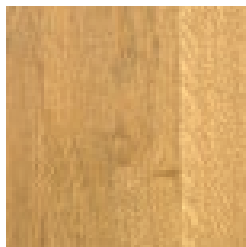

ornamentation. Baffles are not only a decorative panel, they are also an acoustic panel characterized by excellent noise absorption, eliminating rumbling and other sound reflections at the same time. Wooden panels are fixed onto a baseboard, which is easy to fit to ceilings or walls with screws. Individual panels can be fitted on walls as a single decoration or to cover the whole surface with multiple panels.

Plank options	Solid wood: Oak, Beech, Ash, Mahogany or MDF: white, light grey, black.
Base option	MDF: white, light grey, black.
Reaction to fire class	B-s2-d0
Space between planks	30mm or 80mm
Panel size	Slim 200mm x 2794mm or Max 500mm x 2794mm
Plank size	19mm x 40mm
Base board thickness	18 mm
Mounting systems	Black screws or hidden clips
